Product description:

Double Recessed and Adjustable Steel Frame for AR111 Lamps - Black Color

The **Double Recessed and Adjustable Frame** in black steel is designed to house two AR111 lamps (not included). This frame offers a recessed installation and features a Kardan-type orientation system, allowing you to direct light precisely in the desired direction.

Dimensions of the Recessed Frame

- **Cut-out dimensions:** 310x140mm
- **Exterior dimensions:** 388x200mm

Kardan System Features

A **recessed Kardan-type frame**, also known as a Kardan adjustable frame, is widely used in the installation of recessed luminaires on ceilings or walls. This system allows lamps to be adjusted and oriented in multiple directions, both horizontally and vertically, providing total flexibility to direct light where needed.

The name "Kardan" refers to a double joint type that consists of two perpendicular adjustment points, allowing precise and

controlled movements of the light beam. This is particularly useful for applications where it is necessary to highlight specific elements within a space, such as exhibitions or architectural details.

Uses and Applications of the Kardan-Type Recessed Frame

This type of frame is ideal for use in:

- Lighting for homes and commercial spaces
- Exhibition and showcase lighting
- Lighting specific areas in rooms or hallways
- Highlighting architectural elements indoors

Compatibility

The **Kardan Double Recessed Frame** is compatible with various types of bulbs, such as halogen and LED lamps. Being a versatile and adjustable frame, it is perfect for those looking for an adjustable lighting system to create customized atmospheres.

This product does not include AR111 lamps, which must be purchased separately.
