Product description:

Triple Recessed and Adjustable Steel Frame for AR111 Lamps - Black Color

The **Triple Recessed and Adjustable Frame** in black steel is designed to house three AR111 lamps (not included). This frame offers recessed installation and features a Kardan-type orientation system, allowing precise adjustment of the light direction.

Recessed Frame Dimensions

- **Cut-out dimensions:** 510x200mm
- **Outer dimensions:** 465x165mm

Kardan System Features

A **Kardan-type recessed frame**, also known as a Kardan adjustable frame, is widely used for installing recessed luminaires in ceilings or walls. This system allows the lamps to be adjusted and oriented in multiple directions, both horizontally and vertically, providing total flexibility to direct the light where needed.

The term "Kardan" refers to a type of double joint consisting of two perpendicular adjustment points, allowing precise and

controlled movements of the light beam. This is especially useful for applications where specific elements within a space need to be highlighted, such as exhibitions or architectural details.

Uses and Applications of the Kardan Recessed Frame

This type of frame is ideal for use in:

- Lighting for homes and commercial spaces
- Display and showcase lighting
- Lighting specific areas in rooms or hallways
- Highlighting architectural features in interiors

Compatibility

The **Triple Recessed Kardan Frame** is compatible with different types of bulbs, such as halogen and LED lamps. Being a versatile and adjustable frame, it is perfect for those looking for an adaptable lighting system to create customized environments.

This product does not include AR111 lamps, which must be purchased separately.
