Product description:

Single Recessed and Adjustable Frame in Steel for AR111 Lamp - Black Color

The **Single Recessed and Adjustable Frame** in black steel is designed to hold one AR111 lamp (not included). This frame offers a recessed installation and features a Kardan-type orientation system, allowing you to direct the light precisely where needed.

Dimensions of the Recessed Frame

- **Cut-out dimensions:** 150x150mm
- **Outer dimensions:** 180x180mm

Features of the Kardan System

A **Kardan-type recessed frame**, also known as an adjustable Kardan frame, is widely used in the installation of recessed fixtures in ceilings or walls. This system allows the lamp to be adjusted and oriented in multiple directions, both horizontally and vertically, providing total flexibility to direct the light where it's needed.

The name "Kardan" refers to a type of double joint consisting of two perpendicular adjustment points, enabling precise

and controlled movements of the light beam. This is especially useful for applications where specific elements in a space need to be highlighted, such as exhibits or architectural details.

Uses and Applications of the Kardan-Type Recessed Frame

This type of frame is ideal for use in:

- Lighting homes and commercial spaces
- Lighting exhibits and showcases
- Illuminating specific areas in rooms or hallways
- Highlighting architectural elements in interiors

Compatibility

The **Single Recessed Kardan Frame** is compatible with various types of bulbs, such as halogen and LED lamps. Being a versatile and adjustable frame, it's perfect for those seeking a customizable lighting system to create tailored atmospheres.

This product does not include the AR111 lamp, which must be purchased separately.
