

## Surface-Mounted 48V Black Magnetic Track 2 Meters

### Product codes:

Reference: PL-CMS2M

### Product features:

Power source (V): 48V  
Colour: Black  
IP: IP20  
Measures (mm): 50x27x2000mm  
Material: Aluminum + PC  
Operating temperature: -20°C ~ +40°C  
Certification: CE - RoHS  
Warranty: 3 años

### Product attributes:

Colour: Black

### Product description:

Surface-Mounted Magnetic Track 2 Meters The **surface-mounted magnetic track** of 2 meters is an innovative and versatile solution for installing low-voltage 48V LED lighting systems. Made from high-quality reinforced aluminum and available in black, this track ensures durability and an elegant finish in any environment.

This **magnetic track** is designed to allow for quick and easy installation of LED spotlights, thanks to its magnetic plate that ensures a firm and hassle-free attachment. The LED spotlights are installed directly on the track using a magnet system, allowing for easy and efficient adjustment and repositioning of the lights, adapting to the lighting needs of each space.

The **2-meter magnetic track** includes two end caps and an opaque polycarbonate cover, which conceals the areas of the track where no spotlights are installed, providing a clean and aesthetically pleasing finish once the system is set up.

#### Installation Options

The magnetic track can be installed in two ways, depending on the needs of your project:

- **Surface Installation:** Ideal for ceilings or walls, this method allows the track to be fixed directly to the desired

surface, providing a stable and discreet installation.

- **Suspended Installation:** If you prefer a suspended installation, you can use our hanging accessory for magnetic tracks (sold separately). This option is perfect for creating suspended lighting effects, especially in spaces with high ceilings.

#### Compatibility and Power Supply

To ensure the proper functioning of your lighting system, it is necessary to use a power supply that matches the load of the LED spotlights you will install on the track. Since power requirements may vary depending on the project, power supplies are sold separately.

#### Technical Specifications

- **Length:** 2 meters
- **Color:** Black
- **Material:** High-quality reinforced aluminum
- **Voltage:** 48V
- **Includes:** 2 end caps and opaque polycarbonate cover
- **Installation Options:** Surface-mounted or suspended (suspension accessories sold separately)
